Work Experience

Sage January 2022 – Current
Software Engineer *Remote*

- Develop and maintain Accounting Data Service handling millions of records from ERP systems.
- Own the Attachments service, resolving critical production incidents and leading feature enhancements.
- Implemented a payments acceptance service, enabling transactions through platforms like Stripe and PayPal.
- Lead security initiatives for the team, managing automated scans and vulnerability patching processes.
- Optimized high-traffic SQL queries with indexing and execution plan tuning, reducing query times by up to 67%.

Lockstep June 2021 – September 2021
Software Engineer Intern *Remote*

- Built accounting data APIs using C#, ASP.NET, and SQL Server for financial data integrations.
- Led development of the Attachments API, allowing users to attach notes and files to invoices, payments, etc.
- Contributed production-ready code adopted by customers during internship.

Education

California State University, Fullerton May 2023
Bachelor of Science in Computer Science, Magna Cum Laude (GPA: 3.88) *Fullerton, CA*

Projects

Snapshot | *Python, FastAPI, SQLite, Twilio*

- Developed a social SMS game that enabled users to share photos with friends.
- Implemented a dynamic prompt system that guided users in sharing images.

GPT Showdown | Winner, FullyHacks 2023 | *Python, FastAPI, Svelte, SQLite*

- Developed an interactive quiz game, similar to Kahoot, featuring Chat GPT as a contestant.
- Implemented web sockets to facilitate real-time participation in user-generated multiplayer quizzes.

Layover Party | Winner, LA Hacks 2023 | *Python, FastAPI, Flutter, SQLite*

- Developed a cross-platform travel app that finds long layovers, allowing users to explore more during their travels.

Searchlight | *C#, .NET*

- A simple and safe open source query language for API design written in C#.
- Implemented new features for MongoDB support and JSON columns.

Leadership and Organizations

Association for Computing Machinery at CSUF Board Member

- Facilitated biweekly software development workshops to enhance students' technical skills.

International Collegiate Programming Contest Team Lead

- Led team in developing strategies for complex algorithm problems, improving performance in competitions.

Irvine Underground Member

- Participate in monthly meetings to learn more about hacking and cybersecurity.

Technical Skills

Languages: C#, Python, JavaScript/TypeScript, SQL, Go, HTML/CSS
Frameworks: .NET, ASP.NET, Azure Functions, Express, Node.js, React, Svelte, FastAPI, Flask
Databases: PostgreSQL, SQL Server, SQLite
Cloud & DevOps: Azure Cloud, Azure DevOps, CI/CD pipelines, Cloudflare, Docker, Git
Other: REST API design, Payments (Stripe/PayPal), Security scanning & patching
